

Feedback & Improvements

Feedback from classmates and lecturer: Sharpen clarity and community recognition.

What We Were Told

- Make supply and request post categories more specific
- Add clearer achievement records or task-based rewards for helping others

How We Improved

- **Mandatory categories:**

Food

Tools

Transport

Study Help

Emergency
Support

- Improved hashtag system to record helpful actions and engagement more meaningfully
- Badges, achievements, and visible contribution history to highlight well-engaged users

Internal Testing: Challenges & How We Responded

Evaluating the app without external users surfaced real technical hurdles — here is what we faced and how we mitigated each one.

Chat Function

Added a **read status indicator** and re-sorted chat boxes by latest message, making conversations feel more organised and realistic.

3D Avatar Integration

- Avatar skin and texture failed to render correctly after loading.
- Background removal
- Automatic rotation anime by default

Google Account Login

Integration remains **incomplete** and is one of the priority items still in progress. This is a known gap we are actively continuing to work on.

Iterative Stability

As new features were added, we continuously refined the core user flow to ensure it **remained functional** even when advanced features were not yet fully finished.
