

Australia Hero: Turning Neighbors into Solutions

Neighbors are not just Neighbors

Resource Waste

Buying a \$100 tool for a 30-minute task.

Physical Task

Need someone with house moving

Knowledge Need

Struggling with quick tech or translation issues alone

From problem to your nearby solutions

Intended Users

Primary Users (Urban residents/Students)

- Urban residents or international students having temporary needs/assistance without local network support

Concerns & Priorities

- **Convenience & Speed** (How fast I can receive support?)

- **Safety** (Verified users, rating)

- **Local Connection** (friendship, in-time support)

Helpers (Community Members)

- People willing to provide resources or physical help motivated by rewards, social connection, and sense of accomplishment

Concerns & Priorities

- **Proximity** (Is it close enough?)

- **Clarity** (Is description of the task clear? Time accuracy?)

- **Recognition** (Rewarding system, social recognition, etc)

The Community Flywheel

3. Reward & Elevate

Helpful actors receive appreciation points, digital badges, and reputation boosts.

1. Ask Nearby

Post a minor need or temporary resource request to the local map.

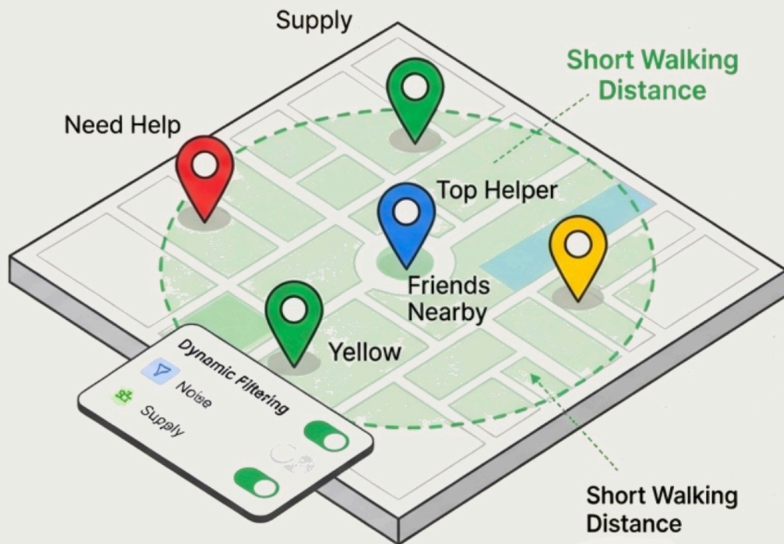

2. Solve Quickly

A neighbor within walking distance responds and fulfills the micro-task.

Anonymous environments become trusted micro-communities.

Map-Based Core & Distance Discovery

- **Hyper-Local Priority:** The algorithm strictly prioritizes matches within immediate walking distance to remove transportation friction.
- **Dynamic Filtering:** Users isolate map noise by toggling specific categories, ensuring they only see relevant opportunities.
- **Request Expiration:** To ensure the map reflects only real-time reality, requests automatically expire, preventing a graveyard of outdated posts.
- **Friends System Addition:** Push the notification automatically when friend post their request

Execution Roadmap to Launch

Milestone 1: Research & Requirements (Weeks 1-2)

User research, feature definition, problem analysis.

Milestone 2: Design & Planning (Week 3)

System architecture, UI wireframes.

Milestone 3: Implementation & Testing (Weeks 4-7)

Core functions, usability testing, improved prototype.

Milestone 4: Refinement & Presentation (Weeks 8-9)

Final UI, bug fixes.

Agile Progress Tracking

- Weekly progress reviews & updates.
- Repository management via GitHub.
- Clear task tracking & responsibility assignment.

Roles & Responsibilities

Leo: Product owner/ Team Leader.

Tammy: responsible for documentation and project materials.

Bella: technical implementation and system design.

Anita: testing and quality assurance.
