

1. Location & Duration

- Lived in Caulfield and have just moved to Fitzroy one month, in Melbourne for 2 years.
- He **does not know his neighbours at all**.
- Just graduated and looking for a job

2. Living situation

- Shared housing with 1 roommate.
- A recent situation where he needed help was when he had just moved and needed a **screwdriver**.
- His roommate was not home, and he did not know his neighbours, so he **could not borrow one**.
- He ended up **buying a new screwdriver**, even though he felt it was a waste of money.
- He also mentioned that living in the suburbs made it **inconvenient to go to market** just to get such a small item.

3. Feelings about asking others for help

- Daniel said he is a **shy person** and does not like borrowing things from friends.
- However, he said that if the people nearby were more accessible through a platform, he would feel **more comfortable asking neighbours**, and it could also help him meet others.

4. Experience helping others

- He has helped others in small ways before, such as **helping with minor everyday things**.
- His motivation for helping is simple: **helping people makes him happy**.
- He said he would **definitely help again**.

5. Challenges and pain points

- Has **not used existing apps or platforms** to seek help before.

6. Concerns about using the platform

- He would stop using it if the app **charged too much**, but if it were free, he would use it.
- **valued signals** that show whether a person is **trustworthy**.
- The leaderboard is not necessary.
- Can cooperate with shops for the frequent helper to get coupons.

7. Trust and safety preferences

- He thought a **ranking or reputation system** would be useful, especially for people seeking help, because it helps them decide whom to trust.
- Photos were seen as acceptable and somewhat useful for recognition, but **not a major factor** in his choice.
- Unlike some users, he preferred that helpers' **real identities be visible**, because he wants to know who is helping him and potentially build real local connections.
